Email: niharikab1806@gmail.com

Github : <https://github.com/niharika-1806>

Mobile: +91 9871380409

SKILLS

Languages:	C, C++, Python (Basic), Java, R, React.js, JavaScript, HTML5
Tools/Platforms:	Git, GitHub, Power Bi, Tableau, MySQL, PostgreSQL, MS Excel, OpenAI, Gemini API
Soft Skills:	Problem-Solving, Team Player, Adaptability, Decision-Making

PROJECTS

AlgoMock — AI-Powered Technical Interview & Code Review Platform Github	July'26
- Developed an intelligent, full-stack interview preparation platform that democratizes access to high-caliber technical mentorship by providing automated static/dynamic code evaluation, Big-O complexity analysis, and adaptive multi-turn mock technical interviews. - Engineered an end-to-end platform with React 19, Spring Boot, and PostgreSQL, integrating Gemini AI for real-time reviews and securing endpoints with JWT. - Achieved sub-second (<1.2s) AI evaluation latency by optimizing system prompt schemas with Gemini Flash Lite, ensured 100% cross-platform CI/CD deployment reliability on Vercel, and delivered real-time candidate practice telemetry with an exclusive administrative control center. Tech Stack: React 19, Spring Boot, PostgreSQL 18, Google Gemini API, JWT, REST APIs, Postman, Vercel	
Smart LMS- Full Stack Library Management System Github	Jun '26
- Created a full-stack REST API using Spring Boot and PostgreSQL to handle persistent data storage for library inventory, user checkouts, and waitlist queues. - Implemented custom data structures into the backend, utilizing a Binary Search Tree (BST) for dynamic sorting, Hash Maps for O (1) instant ISBN lookups and a LIFO stack for real-time system activity logging. - Designed a responsive, glass morphism-themed frontend using vanilla JavaScript and Tailwind CSS, utilizing asynchronous fetch requests for seamless UI synchronization and error handling. Tech Stack: Java, Spring Boot, PostgreSQL, Tailwind CSS, JavaScript	
Weather Data Analysis Github	Apr'26
- Analyzed ~80K daily weather records across 24 Indian cities over 10 years (2016–2025) to identify regional climate patterns and environmental risks and performed data integration, cleaning and geospatial city mapping using pandas & engineered features for heatwave detection, storm identification, rainfall status using IMD classification, water balance, climate comfort, and solar potential. - Conducted EDA and applied ANOVA, T-Test, and Pearson Correlation to statistically validate temperature differences across cities, coastal vs. inland regions, and rainfall–cloud cover relationships. - Built an interactive Power BI dashboard to visualize key climate trends, extreme weather events, rainfall patterns, and city-level environmental insights for data-driven comparison and decision-making. Tech Stack: Python, Pandas, NumPy, Plotly, Folium, SciPy	

TRAINING

Competitive Programming Lovely Professional University Link	Jun'26 – Jul'26
- Cultivated a strong understanding of competitive programming and data structures and algorithms by practicing many problems and learning advanced data structures and algorithms. - Focused on writing clean and efficient code by improving logic, reducing complexity, and checking how the code performs. - Solved 800+ challenging problems across multiple coding platforms, strengthening consistency, accuracy, and overall problem-solving speed.	

CERTIFICATES

Data Structures and Algorithms Programming Pathshala	Aug'26
Database Management System Infosys Springboard	July'26
Data Management (Excel and Tableau) Tech Veda	Mar'25

EDUCATION

Lovely Professional University Bachelor of Technology Computer Science and Engineering; CGPA: 9.18	Phagwara, Punjab Aug'24 – Present
G.D Goenka Public School Intermediate, Percentage: 92% Matriculation, Percentage: 94%	New Delhi Mar'23-May'24 Mar'21 -May'22
